

HOSTED EMAIL ENCRYPTION

THE ERADO DIFFERENCE

- Deep scan of email messages including image based attachments
- Automatic encryption of message via custom defined policies
- Quick and simple setup, fully hosted, works with all mail servers, and most 3rd party hosting services
- Automatic virus scanning on all messages
- 24x7 expert support

THE SECUREMAIL EXPERIENCE

- **SENDERS:** The service is easy to user, individual senders do not need to decide what is and isn't sensitive data
- **RECIPIENTS:** Retrieval of encrypted messages via PGP, S/Mime, and TLS are simple. Secure web portal message are quick and easy
- **ADMINISTRATORS:** Easy set-up and configuration minimizes the burden on administrators and end-user training

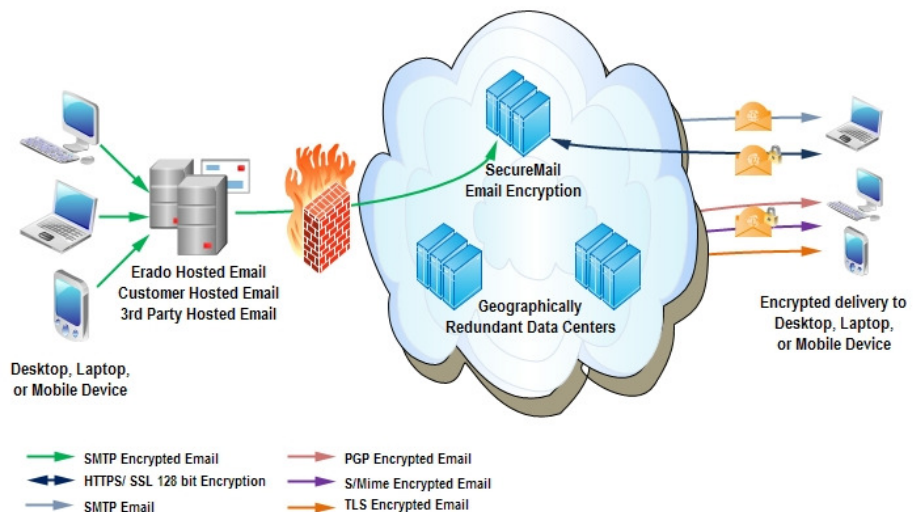

SECUREMAIL POLICY BASED EMAIL ENCRYPTION

Email is firmly established as a key business communication channel. However, communicating using email involves risks. Intellectual property or other sensitive information may be intercepted and then read, deleted or altered before it reaches its intended destination.

Regulations and legislation are also increasingly holding businesses responsible for safeguarding the confidentiality of the information they send via email.

Despite the potential price of failing to ensure adequate protection, many organizations do not take the steps necessary to safeguard the privacy and integrity of their email communications. Furthermore, although encrypting email generally represents the best solution, not all of the encryption services currently available offer businesses the certainty, ease-of-use and affordability they require.

Erado's SecureMail Encryption Service with its deep scan rules based delivery policy ensures the confidentiality of email communications and all the information they contain. It achieves this through Erado's **"Best Delivery"** solution which automatically utilizes the best combination of industry standard PGP, S/Mime, TLS/SSL, and Secure Web Portal technologies.

KEEPING YOUR DATA SECURE

- The Erado solution allows you to send secure and encrypted email
- Outbound email travels between your email server and our infrastructure via a TLS (Transport Layer Security) encrypted tunnel
- When used in conjunction with our Email Security Services, you benefit from an added layer of security when your company's email security and protection are applied
- Erado's secure and brandable portal allows external users to view and download secure messages
- Email and attachments are deduplicated and stored in an AES encrypted state along with the relevant metadata
