

HOSTED EMAIL SECURITY

THE ERADO DIFFERENCE

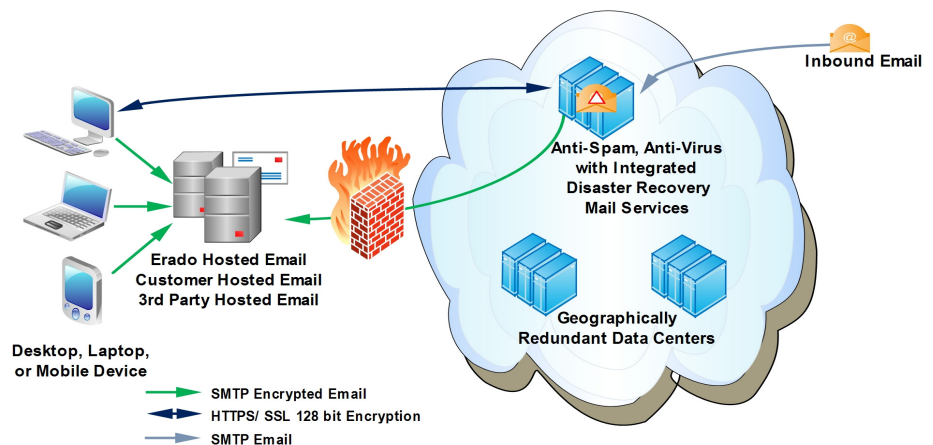

- Deep scan of email messages including image based attachments
- Automatic quarantine of message via custom defined policies
- Traditional filtering or challenge response protection options
- Quick and simple setup, fully hosted, works with all mail servers, and most 3rd party hosting services
- Automatic virus scanning on all messages
- Real-disaster recovery with optional Disaster Recovery Mail Services
- 24x7 expert support

COMPLETE SPAM AND VIRUS PROTECTION

Spam and viruses are a nuisance, productivity waster and unfortunately a fact of life. Today upwards of 80% of all inbound email is considered to be spam. Stopping spam and viruses before they reach your employees in-boxes is the ultimate goal.

Erado's Email Message Security suite offer two options to protect your users in-boxes, both include multi-vendor virus and malware filtering for complete protection

- **Traditional Spam Filtering:** which incorporates extensive filtering options and reputation analysis
- **Sender Address Validation** (challenge response): which requires the sender to manually validate themselves via a secure web portal limiting messages to actual or known senders

EMAIL DISASTER RECOVERY

Our hosted message security service includes disaster message queuing. This service automatically holds all email destined for your organization during planned maintenance, server outage, or disaster until it can be delivered.

If your incident last longer than your business continuity plan allows you can instantly activate an optional disaster recovery email server for complete protection.
