

iPhone, iPad, iPod touch IMAP Mail Setup

Setting up

Before you can use your email account on iPhone – you need to add your account to Mail.

1. Tap Mail
2. Select your account type. Tap Other.
3. Enter your account information and tap Save. Mail configures most email accounts automatically. Otherwise, you will be prompted for any additional settings.
4. Once your account information is saved – you can start sending and receiving mail.

You can configure additional accounts by tapping Settings > Mail, Contacts, Calendars > Add Account.

For more information please check:
http://www.apple.com/support/iphone/assistant/mail/#section_1

If prompted for more information, you will need the following settings:

Security encryption: SSL

Incoming server: see your welcome kit

Incoming server port: 995

Outgoing server: see your welcome kit

Outgoing server port: 587

Outgoing server requires authentication (Check-box / Yes)
